You and your home are both very sensitive to humidity. The high level of water in the air is to blame for the muggy, steam-room feeling you experience on humid days. Humidity also allows the formation of dust mites, mould and mildew in your home; which are all health concerns for people suffering from allergies.

The dehumidifier helps to create a healthier and more comfortable environment by reducing moisture contained in the air. Walls, furniture, photographs, paintings and electric equipment are also sensitive to high levels of humidity in the air.

With the dehumidifier, you can protect your home and its interior from the negative effects of humidity. You can also use it to dry your laundry extending the life of your favourite clothes.

The dehumidifiers are remarkable for their compact dimensions, low weight and modern design. Water disposal is made convenient with the water collection tank, or with the external hose connection for continuous drainage. All four models have a carbon filter to help clean the air from dust and large particles. A timer off function is available to allow the automatic shut down of the unit 2, 4 or 8 hours ahead.

# Compact and multi-functional

## Defrost indicator

In very humid conditions, the dehumidifier may stop a few minutes to automatically defrost its condensing mechanism – the unit will automatically restart after the defrosting is finished

## Hygrometer/ Humidistat

Indicates the level of moisture in the air

## Bucket full indicator

The unit will stop automatically when the water tank is full – it will automatically restart after the tank is placed back empty in its normal position

## Ioniser

The ioniser helps remove dust and germs and further enhances the overall quality of the air

## Function

Two dehumidification speeds (high / low), and one air filtration only mode (without dehumidification) – the two dehumidification speeds also activate the air filtration

## Auto-restart

After a loss of power, the dehumidifier will automatically restart in its previous operating settings – if the timer was on, it will resume the countdown from its original setting (2, 4 or 8 hours, continuous)

## Timer

For automatic shut down of the unit after 2, 4 or 8 hours the unit can be used on continuous mode

# Technical specifications

<b>Features</b>	<b>DRY-C20</b>
Capacity at 30°C and 80%RH	20 litres per day
Tank volume	5 litres
Timer control	2 / 4 / 8 hours or continuous
Hygrometer (Humidistat) <sup>(1)</sup>	yes
External drain connector	yes
Control panel	digital soft keys
Control	microcomputer
Fan speed	2
Water full indication	yes
Automatic shut-off	yes
Smart automatic defrost	yes
Charcoal air filter	yes
Ioniser	yes
Automatic restart <sup>(2)</sup>	yes
Bucket removal	side access with handle
Air inlet	back
Air outlet	multi-directional
Handle	retractable
Wheels	4 castors
Colour	gray and metal gray

## Technical Specifications

Voltage	220 - 240 V
Frequency	50 Hz
Wattage	370 W
Current	1.60 A
Compressor type	rotary
Refrigerant	R-134a
Working environment	5~35°C
Noise level	46 / 51 dBA
Plug type	UK type
Net weight	10.7 kg
Gross weight	11.9 kg
Product dimensions (cm)	17 W x 42D x 52 H
Packaging dimensions (mm)	24.5W x 47D x 58 H

(1) indicates the humidity level in the room  
(2) after power outage
